

SIMPACK in America and Japan

Intec and Altair signed a distribution agreement making Altair the exclusive distributor for the entire family of SIMPACK products in the US, Canada and Japan. This results in a further enhancement of the world-leading solver technology SIMPACK.

Generating a turn over of more than sixty million dollars a year and employing more than 550 people, Altair Engineering, Inc. is among the world's leading providers of engineering consulting services, including product development, process and product information management, virtual prototyping, testing and training.

Within the framework of a very successful initial co-operation, Altair and Intec developed an interface between the solver technology SIMPACK and the mechanical system simulation pre- and post-processor for standardised automotive engineering tasks.

This interface was partially financed by five leading car manufacturers. As a logical consequence Intec and Altair expanded the existing partnership by a distribution agreement signed by James Scapa, President of Altair, and Alex Eichberger, Managing Director of Intec. Altair is the exclusive dealer for

the whole range of the SIMPACK product family in North-America and Japan.

Customers, in these countries, will now be able to benefit from direct support. This substantial extension of the market results in a further growth of the SIMPACK development which will benefit all our customers.

A. Eichberger (Intec) and J. Scapa (Altair)
