

INTEC in the Technologiepark

Due to the substantial growth INTEC has recently seen, we have now moved to attractive new offices in the Wessling Technologiepark. The improvements brought about by this move regarding services and support are explained in the following article.

In the middle of last year we realised that INTEC had outgrown the office space at the DLR (German Aerospace Research Centre). The number of employees at INTEC had increased by a substantial 60% in the last year alone. Fortunately, a new technology park with modern and appealing office space was being developed next door to the DLR. The new location would enable the continued growth of INTEC along with the ability to maintain the successful working relationship between us and the DLR.

The Move

Work continued as normal up until midday on Friday the 2nd of March and after a long and hard weekend, recontinued as normal on Monday the 5th of March. Thanks to the help of our employees everything ran smoothly and quickly.

The move was performed so efficiently and with so little disruption that many customers only realised that we had moved because our

address had changed - just as our customers would expect.

Changes and Benefits

What changes and benefits has the move brought to our customers and visitors, and what has remained the same? Our customers will still benefit from the long and close working relationship between INTEC and the DLR. Our e-mail address, web address, town and the main telephone number have all remained unchanged. Of course, the charm of the surrounding 5 lakes region has also been kept. However, some visitors will surely miss the obligatory check-in at the DLR security gates.

Our hotline has also been reorganised with new telephone numbers which will offer our customers better and more efficient support. Information concerning hotline support can be found under www.simpack.com.

With our new 650m² office space we are now able to welcome our guests in new spacious friendly and light meeting and training rooms. We also have a project room available for visitors and customers for working alongside our engineering and consulting team.

Please drop by - you'll be sure to like it.
